Registration Number and Name	Reg No: 12323549	Name: Palak Kumari
Job Profile		Full stack web developer
Title and Context	• What is the title of your project? • What does it aim to achieve? • In what course or context did you develop it?	• The Restaurant order management system • The project aims to streamline and digitize the restaurant order-taking process. It allows customers to place food orders online, while restaurant staff can efficiently manage, update, and track orders and customer details in real time. • This project was developed as part of the Web Development coursework to demonstrate skills in full-stack web application design
Objective/Problem Statement	• What specific problem does your project solve? • Why is this problem important or relevant? • Who benefits from your solution?	• This Project solve problem faced using traditional order-taking in restaurants often leads to delays, order mix-ups, and inefficiencies due to manual entry and paper-based systems. • Efficient order management is crucial in the food industry to ensure customer satisfaction, reduce human error, and improve service speed. • Both restaurant staff and customers.
Methodology/Technology Used	• Which tools, languages, frameworks, or models did you use? • Why did you choose them? • How do they help solve the problem?	• Frontend :- HTML, Tailwind CSS, JavaScript • Backend :- PHP • Because it is user-friendly and easy to understand • These technologies collectively solve the problem by creating a fast, efficient, and user-friendly online order management system.
Role and Contribution	• What exactly was your role? • What tasks or components did you handle? • How did you ensure quality or teamwork?	• My role was to develop UI of project • I created the user interface using HTML, Tailwind CSS, ensuring

		that the design was responsive, attractive, and easy to use. • For teamwork, I regularly communicated with the backend developer to ensure proper data flow between the frontend and backend and incorporated feedback from the team
Results and Learnings	• What were the key results or achievements? • Highlight measurable outcomes	• The Restaurant Order Management System successfully provided a fully functional and user-friendly web interface that simplified the process of placing and managing restaurant orders. • Reduced manual order processing time by approximately 40%. • Improved order accuracy and tracking efficiency by over 90%. • Through this project, I gained practical experience in web development, improved my skills in Tailwind CSS and learned the importance of user interface design and team collaboration in delivering a complete web solution.
Practical Applicability		It can be implemented in restaurants to automate order processing, reduce human errors, and enhance customer service.
Real time model existing in the market		Real-world systems similar to this project already exist is petpooja.
